

Safe and compliant client chat for your business

Qwil Messenger is a single chat app that solves the challenge of making chat safe and compliant when it matters most: between staff, clients and partners.

Securely chat and share files with your clients

- Instantly deploy your own secure, branded chat service between your staff and clients.
- Replace the use of insecure email and non-compliant social chat in your business.
- Own and control your business data to meet the latest compliance and data protection regulations (including GDPR), in your hosting location of choice.

One app for everyone

Qwil Messenger has been designed to work seamlessly on both mobile and web with all your companies in one app. We call them "tenants", and they are accessible from the side menu whether you are a staff of one and/or a client of another, with bespoke contact lists and usage terms set by each tenant. Your chats are synchronised across all your devices and can be accessed on as many devices as you like.

iPhone

Android

Web

Intuitive

Looks and feels like chat. Invite, share, track and be notified in a familiar way.

Confidential

Chat information used only for intended business purposes and no other.

Secure

Your data is protected and remains private at all times.

Coordinated

Chat with the right participants, at the right time.

Verified

Know that users and businesses are who they say they are.

Compliant

Supports recording requirements for company communications.

"Qwil Messenger is like WhatsApp for financial and professional services. It is a product which we believe has significant potential to improve the engagement with clients, partners and businesses."

- **Graham Kellen**, Chief Digital Officer
